For short implant placement, implant major diameter need o be $\leq$ the bur (average diameter) at the 8 mm laser mark. Please refer to page 16 in the Instructions for Use Manual.

In Ridge Expansion cases, please oversize your osteotomy and make sure that the crest diameter is equal to or larger than the implant major diameter

In Hard Bone (Mandible), after Finishing the Full Osteotomy Preparation, Use the Next Larger Size Densah Bur to the $3 m m$ Laser-Mark Depth to make sure the Osteotomy Crestal Diameter is Equal to or Larger than the Implant Major Crestal) Diameter

Use Densah Burs in full-step increments for Sinus Lift cases Example: $2.0 \mathrm{~mm}, 3.0 \mathrm{~mm}, 4.0 \mathrm{~mm}, 5.0 \mathrm{~mm}$

Use large block display to compare Bur identification system when using the schematic below for proper Bur usage

- VT5 Set
- VT8 Set
- VS8 Set

## Densifying Mode CCW (800-I500) RPMs / Cutting Mode CW (800-I500) RPMs

| OCO Biomedical ${ }^{\text {® }}$ |  |  | Dual Stabilization, Engage |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Soft Bone |  |  |  |  |  | Hard Bone (Mandible) |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  | In densifying mode make sure your osteotomy is 1.0 mm deeper than the actual implant final length. In extreme hard bone, utilize DAC (Densify After Cut) Protocol. Find protocol in IFU. |  |  |  |  |  |  |  |  |
